**Published / Filed:** **Aug. 1, 2001 / July 22, 1999**

**Application Number:** **TW1999088112490**

**IPC Code:** **G06F 1/26;**

**ECLA Code:** **None**

**Priority Number:** **July 30, 1998 KR1998000030934**

**Abstract:**

A method for controlling power of a computer system using a wake on local area network (LAN) signal and an apparatus therefor are provided. The method includes the steps of powering devices other than predetermined peripheral apparatuses sensible to power on/off, when the wake on LAN signal is sensed in the power-off state of the computer system checking power on enable or disable in wake on LAN enable from the system setup state during booting of the computer, and powering on the predetermined peripheral apparatuses if a system is set to power on enable, and powering off the devices powered on in the step of checking power on enable or disable if not.
